

How to save over £1,000 per year on your energy costs in 2023

 Six step guide

Install energy-efficient appliances

One of the biggest sources of energy consumption in your home comes from your appliances. Consider upgrading to appliances that are Energy Star certified, which are designed to use less energy and save you money on your energy bills.

Save up to £220 per year

Use LED light bulbs

LED light bulbs are the gift that keeps on giving: not only do they use up to 90% less energy than traditional incandescent bulbs, but their long life means you'll save money in the long run!

Save up to £153 per year

Install a programmable thermostat

With a programmable thermostat, you could be reducing those sky-high energy bills! Easily customize the temperature of your home and create an automatic schedule that keeps it just how you like it - lower when away and higher while around. Save yourself time managing comfort levels

Save up to £290 per year

Seal air leaks

Don't let your money fly out of the window - literally! Draft proofing is an economical and effective way to keep unwanted airflow from escaping. With a few simple purchases online, you can quickly assemble easy-to-use draft stoppers that guarantee to help secure those costly drafts.

Save up to £60 per year

Turn down boiler flow temperature

Your boiler works hard to keep your home warm and cosy. To optimise its performance, you can regulate the water temperature that flows through it by reducing flow temperature - not lowering the thermostat itself!

Save up to £100 per year

Consider solar energy

Installing solar panels on your home can help you generate your own electricity and reduce your reliance on the grid. This can lead to significant savings on your energy bills over time, while also reducing your environmental impact.
